RE: Remediation of Ground Water Contamination
Near Pavillion, Wyoming

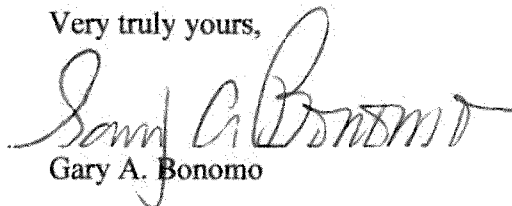

Dear Mr. Oberley,

We reviewed your publication of the "Investigation of Ground Water Contamination near Pavillion, Wyoming" and also noted perhaps on your website that Grants were available for further investigation of the Contamination of the Ground Water. We are aware that a joint investigation by the EPA and the State of Wyoming has been undertaken but feel certain that further testing will not significantly alter the result of the investigation.

We are interested in knowing if Grants are also available to develop a Remedial Procedure for the Contaminated Ground Water near Pavillion. We did note from page 39 of your document the generally remediation is "typically infeasible or too expensive"; however, in the particular application there may be an economically feasible procedure for the remediation of the Contaminated Ground Water.

We are interested in applying for such a Grant if they are available. Please advise us at your convenience as to the availability of these grants. Thank you for your assistance.

Very truly yours,

Gary A. Bonomo
